	3.	On 3 October, the barracks installation southeast of Ruedersdorf was occupied by about 2,000 troops. Sentries observed wore red-bordered black epaulets, including some with artillery and motor transport insignia. Between 1 and 4 October, source determined that the woods adjoining the installation to the south and northeast, as well as the approach roads to these woods, had been marked as restricted area. Camouflaged observation posts had been established around the quarters inside of the fence. Most of these observation posts, which resembled earth bunkers, were located on the west side, about 30 meters from the northwest corner and on the south side, about 50 meters from the southwest corner. Source observed lean-to roof, about 12 x 50 meters, which had been newly erected on the south side of the quarters. Little activity was observed in the billeting area during the period under review. On 1	3
